## Event Overview

Asia, and more specifically Malaysia, is endowed with ample mineral resources much needed in today's technological revolution and energy transition. In 2020, the Malaysian Government launched the Mineral Industry Transformation Plan (TIM) 2021-2030 and classified five (5) main minerals as technological and strategic minerals, namely rare earth elements (REE), tin, bauxite, kaolin, and silica sand. The aim is to ensure that they are developed responsibly and utilised sustainably, in addition to significantly enhance their contribution to national income.

This Conference seeks to examine and explore the challenges, issues and efforts especially in regards to attract investments in the minerals industry value and supply chain through strategic partnerships with all stakeholders in the Federal, States and industry landscape. Only through such collaborative efforts and positive engagements can the mineral resource industry be developed responsibly and sustainably towards achieving its transformation goals.

## Event Highlight

This industry driven Conference aims to bring together all stakeholders both in the public and private sectors, nationally and globally, to share views, ideas and suggestions on joint partnerships and collaborations towards enhancing mineral resource development focusing on the following priorities:

- ▶ **The importance of creating, promoting and attracting mineral investment to enhance mineral production and income for the nation and the people.**
- ▶ **The need for strategic partnerships, connectivity and engagements between all stakeholders in the entire industry value chain to sustain adequate minerals supply.**
- ▶ **The implementation of ESG and sustainable best practices in the entire mining ecosystem.**
- ▶ **The development of the strategic and critical minerals sector as the driving force towards today's technological revolution and energy transition.**
